# 1010 Amur Falcon

*Falco amurensis*

*IUCN Status Least Concern*  
IUCN (2019-2)

male mass = 127 g  
female mass = 150 g  
mean mass = 140 g

area requirement (of pair/2.2 individuals) = 3.4 km<sup>2</sup>

from Newton (1979) figure 10:  $area\ km^2 = 0.4 + (0.02 * female\ mass\ g)$   
replaced by direct measurement of field density where we have data

this figure is used for estimating density of breeding individuals and offspring in good habitat  
we assume twice the area requirement in suboptimal habitat  
and half the area requirement in optimal habitat  
breeding population estimates represent theoretical maxima where habitat is saturated  
nest-site limitation and the floating / non-breeding population are not yet fully accounted for

## HABITAT SPACE ANALYSIS
