210 Short-toed Snake-eagle

Circaetus gallicus

IUCN Status **Least Concern**
IUCN (2019-2)

male mass = 1600 g
female mass = 1800 g
mean mass = 1700 g

area requirement (of pair/2.2 individuals) = 36.4 km²

from Newton (1979) figure 10: $area\ km^2 = 0.4 + (0.02 * female\ mass\ g)$
replaced by direct measurement of field density where we have data

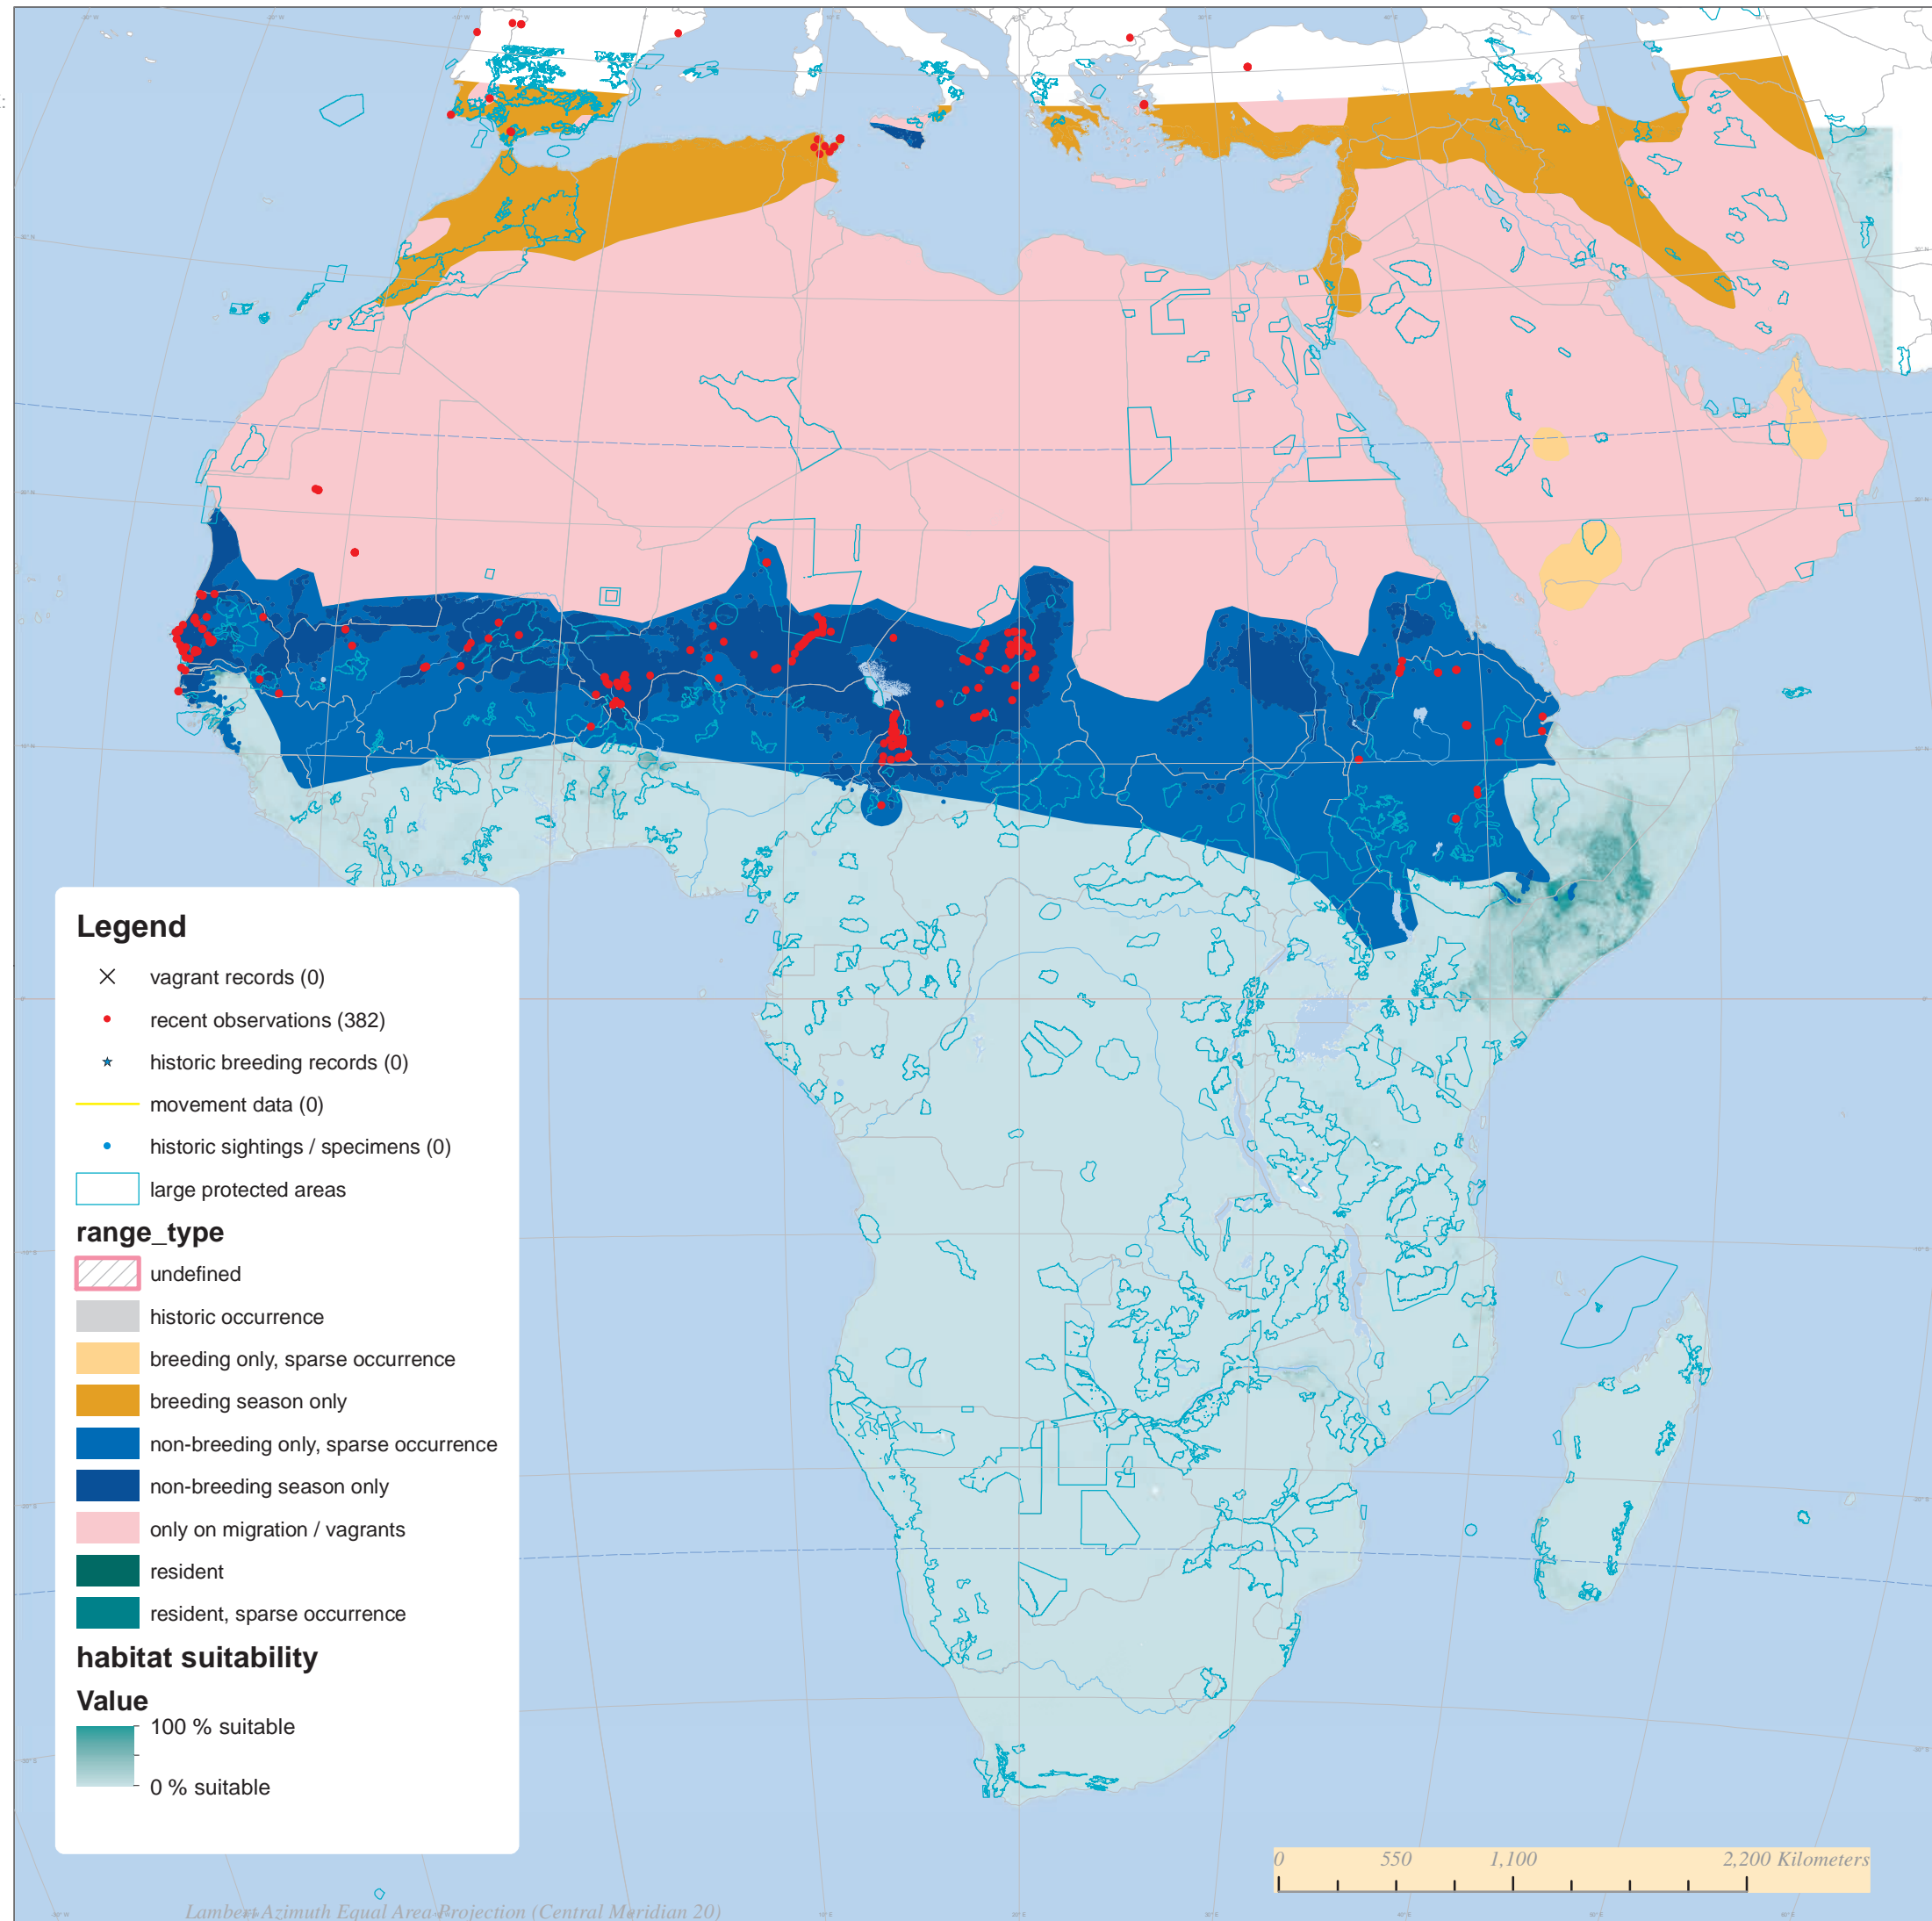

this figure is used for estimating density of breeding individuals and offspring in good habitat
we assume twice the area requirement in suboptimal habitat
and half the area requirement in optimal habitat
breeding population estimates represent theoretical maxima where habitat is saturated
nest-site limitation and the floating / non-breeding population are not yet fully accounted for
